The Imaging Source Helpdesk

Kameraeigenschaften programmatisch einstellen

S.Geißler - 2021-08-11 - Programming

All camera properties can be adjusted programmatically. Usually this is done be the so called "VCDProperties". This class is very powerful, but hard to understand for beginners. Therefore, we created a small tool, that generates source code in C++, C# and VB.NET for a connected camera. The tool can be downloaded from https://github.com/TheImagingSource/IC-Imaging-Control-Samples/tree/master/Create%20Camera%20Properties%20Source%20Code.

There is a binary in a zip file and the source code of the tool itself.
